

Gangways & Passerelles

Hydromar is manufacturing the SEAWALK gangways for many years now. In the past decades this product has been developed from a custom build product to a semi-standard build Mediterranean gangway. Besides the standard range with its wide range of variables Hydromar also develops and produces tailor made equipment based on standard solutions to fulfill the yachts special requirements.

All products have been designed to create a high quality and firm gangway with good looks as the gangway is your first step onto the yacht.

SW4-SL-11,0m

All standard SEAWALK gangways are designed to be able to support 250 kg at the end in a free hanging state. The gangway itself is standardly delivered in aluminium, painted into the yachts colors. The hydraulic functions are commanded by an electric push button control on the PLC box with a wireless remote control and fixed control panels as optional.

The SEAWALK gangway can be delivered with 1, 2, 3, or 4 stages with also slewing ps/sb as option.

Depending on the required gangway length the frame size is chosen: size 2 up to 4m, size 3 up to 7m, size 4 up to 10m, size 5 up to 15m.

Depending on the available storage length (trunk length) it is determined whether the design needs telescopic parts.

With the data on our information leaflet we are able to make you a specific design with the specified product description.

The walking surface is made from heavy teak gratings or solid teak planking. As an option we can deliver fiber optic lighting integrated in the teak.

All our SEAWALK systems are tested functionally and under full load in our own production facility.

All these systems can be delivered as standard packages while custom build versions can be designed and fabricated within our own production company.

Examples of our custom designs are stainless steel and high gloss polished versions with folding and/or telescoping movements included.

Stanchions or fixed railings can be delivered in many versions depending on the actual gangway configuration.
