

# Side boarding ladders

Within the group of boarding equipment Hydromar is manufacturing the SEASTAIR side boarding ladders for many years now. In the past decades this product has been developed from a custom build product to a semi-standard build product line. Besides the semi-standard range fully customized side boarding ladders are being designed and produced to fully fit custom solutions.

Both products have been designed to create a high quality and firm side stair to welcome your guests in a very trustful way onto your yacht.

SST-SH-1-5

Hydromar is delivering the SEASTAIR boarding ladder in three main categories;

At first the conventional accommodation ladder, a simple overturning movement from the bulwark, followed by the lowering of the self-inclining steps, is seen very often. When the bulwark is too low or not present at all, two versions are possible.

The shifting SEASTAIR is stowed below deck alongside the yacht. A long hull door with pantograph hinges closes the storage room.

The pivoting SEASTAIR is driving perpendicular from the hull and can be used alongside the yacht or turned away towards the shore. A multi-function boarding ladder is created. Optional there can be made an automatic hydraulic actuated stainless steel banister. Special versions can be made like telescoping platform to create clearance from the ship's hull.

All standard side stairs (accommodation ladders) are as the gangways designed to be able to support 250 kg at the end in a free hanging state. The side boarding ladder itself is standard delivered in stainless steel, painted into the yachts colors.

The hydraulic functions are commanded by an electric push button control panel in the bulwark. All our SEASTAIR systems are tested functionally and under full load in our own production facility. All these systems can be delivered as standard packages while custom build versions can be designed and fabricated within our own production company.

The standard range enhances 5, 8, 10 and 17 step versions in fixed and 90 degrees rotating ladders. Examples of our custom designs are 180 degrees rotating and high gloss polished versions with manual or hydraulic folding stanchions.
