

Deck cranes

Every HYDROMAR yacht crane is constructed to the design standards for modern lifting appliances in a marine environment. They represent the finest "value for money" available.

HYDROMAR has models perfectly suited to every operation.

Each is the result of over 20 years experience in the design of modern electro-hydraulic lifting equipment.

HYDROMAR deck cranes are stronger than most, and offer an outstanding ease of operation with a wide range of standard drives, hydraulics and controls.

Base frame and boom are made entirely of stainless steel, though on special request fabrication in aluminium is also available. Every HYDROMAR deck crane leaves the factory having completed a full test program for loading and functionality.

HYDROMAR deck cranes are available in three series: SEAHORSE, SEASCOTER & SEALIFT

For small tenders and jet skis the SEAHORSE range is available for safe working loads between 400 and 750 kg, with either fixed or single telescoping boom in approximately 8 models.

This is a standard but reliable crane with specifications and prices that fit the requirements. The standard SEAHORSE is a self-supporting deck crane with a complete separate power pack.

The SEASCOTER cranes are built to a high specification and can comply with any classification society rules required. SEASCOTER cranes are all fully proportionally remote controlled with emergency manual control always available.

The SEASCOTER is available for safe working loads from 500 kg up to 2 tons in the standard range. They can be custom built for a safe working load of up to 3 tons.

The SEASCOTER is available with rigid, single telescopic or double telescopic boom.

The third category, SEALIFT comprises m.o.b. and rescue cranes for yachts over 500GT.

This series of cranes is approved for MCA under rules of SOLAS. A standard range of 4, 6, 9 and 12 ton. is available. Fully custom designed cranes belong to our delivery program due to our in-house engineering and full production facilities.
