

# Garage cranes

## SLIDING BEAM CRANES

Sliding beam cranes in single or double arrangement: SEASLIDE

Almost traditional now are the conventional sliding beam Cranes or overhead beam cranes. Hydromar delivers these cranes with SWL from 500 towards 4000 kg per arm. They are often used as single arm cranes for smaller tenders or jetski's. For larger yachts tenders are often launched alongside. The yacht will then have a set of two sliding davits.

## SLEWING BEAM CRANES

Slewing beam cranes in single or double arrangement: SEASWING

Slewing beam cranes are used to create a full flexible tender garage layout. As the cranes are mounted to the bulkheads of the tender garage, they will create more head room in the garage and will need a much lighter deck construction compared to fixed sliding beam cranes.

Hydromar offers two solutions for all type of tenders:

### Single or double sliding beam cranes: SEASLIDE

They are often used as single arm cranes for tenders coming out of the hull perpendicular. For yachts over 60m tenders are launched alongside.

The yacht with a set of two sliding davits for each tender.

Each sliding davit will be tailor made to the right length configuration to fit the garage area.

- Safe working load (SWL) of 500 to 4000kg / arm
- Arm length from 2.5 to 7m.
- External power unit
- Available in every Megayacht Quality Paint System color.
- Made in stainless steel.
- 

All davits will be tailor made to the right length configuration to fit the tender garage.

## Single and double slew beam cranes: SEASWING

Where sliding beams are fitted on one location and therefore fix the tender garage layout, DSB cranes are developed to create a full flexible tender garage layout.

- Safe working load (SWL) of 1000-5000kg / arm
- Arm length from 2.5 to 5m.
- Moving the tender with closed hull doors
- Can be placed at any possible location
- Ease of operation with simple remote control
- Available in every Megayacht Quality Paint System color.
- Made in aluminium or stainless steel.
- Lifting one tender with two slewing beam cranes with programmed trajectory.
- Flexible tender garage lay-out.
- More tender garage head space due to less deck structure.
